

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A method comprising ~~for displaying phases on a computer system in which components of a system for providing a web architecture framework are delivered, wherein all steps are performed on the computer, the method comprising the steps of:~~

[[a)] displaying, through a display adapter by a processor, a pictorial representation of an existing system including a plurality of components;

[[b)] identifying, from the plurality of components, a first component group containing additional components and a second component group containing optional components, the additional components being required for an implementation of a the system, the optional components being optional for the implementation of the system;

[[c)] compiling, by the processor, an ordered listing of the additional components for implementation into the existing system, the ordered listing providing an order that is required for installing the plurality of components ~~in the web architecture framework, wherein the ordered listing comprises a sequential order for installing the additional components;~~

[[d)] determining, by the processor, a first set of the additional components for implementation in a first implementation phase;

[[e)] determining, by the processor, a second set of the additional components for implementation in a second implementation phase, the first set being implemented before the second set can be implemented;

[[f)] modifying, through the display adapter by the processor, the pictorial representation of the existing system to show a pictorial representation of the first set ~~of components~~ being indicia coded to indicate that they are to be delivered in the first implementation phase; and

[[g)] modifying, through the display adapter by the processor, the pictorial

representation of the existing system to show a pictorial representation of the second set of components being indicia coded in a manner different from ~~unique with respect to~~ the indicia coding of the first set of components to indicate that the second set of components is to be delivered in the second implementation phase; and ~~that a proper functioning of the second set of components require an installation of the first set of components in the first phase~~

indicia coding components in the plurality of components to indicate redundancy in the plurality of components.

2. (Currently Amended) The ~~[[A]] method for displaying phases in which~~ components of a system for providing a web architecture framework are delivered as recited in claim 1, wherein a legend is presented which defines the indicia coding with respect to the phases of delivery of the components.

3. (Currently Amended) The ~~[[A]] method for displaying phases in which~~ components of a system for providing a web architecture framework are delivered as recited in claim 1, wherein the components of the existing system are selected from the group of components including security services, network services, web services, client services, integration capabilities, data services, directory services, management services, operation services, and developer services.

4. (Currently Amended) The ~~[[A]] method for displaying phases in which~~ components of a system for providing a web architecture framework are delivered as recited in claim 1, wherein the components of the existing system are selected from the group of components including commerce-related services, content-related services, administration-related services, customer-related services, and education-related services.

5. (Currently Amended) ~~The [[A]] method for displaying phases in which components of a system for providing a web architecture framework are delivered~~ as recited in claim 1, wherein the indicia coding is selected from the group of indicia coding including texture coding, color coding, and shading coding.

6. (Currently Amended) ~~The [[A]] method for displaying phases in which components of a system for providing a web architecture framework are delivered~~ as recited in claim 1, wherein the step of displaying a pictorial representation of an existing system ~~including a plurality of components~~ also includes displaying additional components that may be implemented into the system.

7. (Currently Amended) An article of manufacture comprising computer program embodied on a computer readable medium ~~for displaying phases in which components of a system for providing a web architecture framework are delivered~~ comprising:

[[a)] a code segment that displays a pictorial representation of an existing system including a plurality of components;

[[b)] a code segment that identifies, from the plurality of components, a first component group containing additional components and a second component group containing optional components, the additional components being required for an implementation of ~~a~~ the system, the optional components being optional for the implementation of the system;

[[c)] a code segment that compiles an ordered listing of the additional components for implementation into the existing system, the ordered listing providing an order that is required for installing the plurality of components ~~in the web architecture framework~~, wherein the ordered listing comprises a sequential order for installing the

~~additional components;~~

[[(d)]] a code segment that determines a first set of the additional components for implementation in a first implementation phase;

[[(e)]] a code segment that determines a second set of additional components for implementation in a second implementation phase, the first set being implemented before the second set can be implemented;

[[(f)]] a code segment that modifies the pictorial representation of the existing system to show a pictorial representation of the first set ~~of components~~ being indicia coded to indicate that they are to be delivered in the first implementation phase; ~~and~~

[[(g)]] a code segment that modifies the pictorial representation of the existing system to show a pictorial representation of the second set ~~of components~~ being indicia coded in a manner unique with respect to the indicia coding of the first set of components to indicate that the second set of components is to be delivered in the second implementation phase; ~~and and that a proper functioning of the second set of components require an installation of the first set of components in the first phase~~

a code segment that modifies the pictorial representation of the existing system to include indicia coding that associates the plurality of components with vendors that provide products and services associated with the plurality of components to provide a visual display of the products and services offered by each of the vendors.

8. (Currently Amended) ~~The An~~ article of manufacture ~~including computer program for displaying phases in which components of a system for providing a web architecture framework are delivered~~ as recited in claim 7, wherein a legend is presented which defines the indicia coding with respect to the phases of delivery of the components.

9. (Currently Amended) ~~The~~ An article of manufacture ~~including computer program for displaying phases in which components of a system for providing a web architecture framework are delivered~~ as recited in claim 7, wherein the components of the existing system are selected from the group of components including security services, network services, web services, client services, integration capabilities, data services, directory services, management services, operation services, and developer services.

10. (Currently Amended) ~~The~~ An article of manufacture ~~including computer program for displaying phases in which components of a system for providing a web architecture framework are delivered~~ as recited in claim 7, wherein the components of the existing system are selected from the group of components including commerce-related services, content related services, administration-related services, customer-related services, and education-related services.

11. (Currently Amended) ~~The~~ An article of manufacture ~~including computer program for displaying phases in which components of a system for providing a web architecture framework are delivered~~ as recited in claim 7, wherein the indicia coding is selected from the group of indicia coding including texture coding, color coding, and shading coding.

12. (Currently Amended) ~~The~~ An article of manufacture ~~including computer program for displaying phases in which components of a system for providing a web architecture framework are delivered~~ as recited in claim 7, wherein the step of displaying a pictorial representation of an existing system ~~including a plurality of components~~ also includes displaying additional components that may be implemented into the system.

13. (Currently Amended) An apparatus ~~for displaying phases on a computer in which components of a system for providing a web architecture framework are delivered~~ comprising:

(a) logic for displaying a pictorial representation of an existing system including a plurality of components;

(b) logic for identifying, from the plurality of components, a first component group containing additional components and a second component group containing optional components, the additional components being required for an implementation of ~~a~~ the system, the optional components being optional for the implementation of the system;

(c) logic for compiling an ordered listing of the additional components for implementation into the existing system, the ordered listing providing an order that is required for installing the plurality of components ~~in the web architecture framework, wherein the ordered listing comprises a sequential order for installing the additional components;~~

(d) logic for determining a first set of the additional components for implementation in a first implementation phase;

(e) logic for determining a second set of additional components for implementation in a second implementation phase, the first set being implemented before the second set can be implemented;

(f) logic for modifying the pictorial representation of the existing system to show a pictorial representation of the first set ~~of components~~ being indicia coded to indicate that they are to be delivered in the first implementation phase;

(g) logic for modifying the pictorial representation of the existing system to show a pictorial representation of the second set ~~of components~~ being indicia coded in a manner unique with respect to the indicia coding of the first set ~~of components~~ to indicate

that the second set of components is to be delivered in a second implementation phase and that a proper functioning of the second set of components require an installation of the first set of components in the first phase;

(h) logic for indicia coding components in the plurality of components to indicate redundancy in the plurality of components; and

(i) [[(h)]] a processor that causes execution of ~~executes computer-executable instructions for performing~~ the logic in (a)-(h) [[(a)-(f)]].

14. (Previously Presented) The apparatus of claim 13, wherein a legend is presented which defines the indicia coding with respect to the phases of delivery of the components.

15. (Previously Presented) The apparatus of claim 13, wherein the components of the existing system are selected from the group of components including security services, network services, web services, client services, integration capabilities, data services, directory services, management services, operation services, and developer services.

16. (Previously Presented) The apparatus of claim 13, wherein the components of the existing system are selected from the group of components including commerce-related services, content related services, administration-related services, customer-related services, and education-related services.

17. (Previously Presented) The apparatus of claim 13, wherein the indicia coding is selected from the group of indicia coding including texture coding, color coding, and shading coding.

18. (Currently Amended) The apparatus of claim 13, wherein the logic for step of displaying a pictorial representation of an existing system ~~including a plurality of components~~ also includes logic for displaying additional components that may be implemented into the system.

19. (Currently Amended) The method as recited in ~~of~~ claim 1, further comprising:
[[h]] in response to determining the first set of additional components [[d]],
determining remaining components;

[[i]] separating the remaining components into primary components and secondary components, wherein the primary components must be installed before the secondary components ~~can function properly~~;

[[j]] including the primary components in the first set ~~of additional components~~;
and

[[k]] including the secondary components in the second set ~~of components~~.

20. (Currently Amended) A computer system comprising:
a processor; and
a memory coupled to the processor, the memory having stored therein instructions
that, in response to being executed, cause the computer system to perform a method for
~~displaying components of a system, the method~~ comprising:

identifying, within an electronic system, a first component group
containing a plurality of additional components and a second component group
containing a plurality of optional components;

compiling an ordered listing of said additional components for
implementation into an existing system [[,]] ~~wherein said ordered listing~~

~~comprises a sequential order for installing said additional components;~~

determining a first set of the said additional components for implementation in a first phase;

determining a second set of the said additional components for implementation in a second phase, wherein the said first set is implemented before the said second set;

displaying the said first set of components with a first indicia coding indicating that the said first set of components is to be delivered in the said first phase; ~~and~~

displaying the said second set of components with a second indicia coding indicating that the said second set of components is to be delivered in the said second phase; ~~and~~

displaying indicia coding that associates components with vendors that provide products and services associated with the components to provide a visual display of the products and services offered by each of the vendors.

21. (Currently Amended) The computer system ~~A method~~ as recited in claim 20, wherein the method further comprises ~~comprising~~:

displaying a pictorial representation of the said existing system.

22. (Currently Amended) The computer system ~~A method~~ as recited in claim 20, wherein the said additional components are required for an implementation of the said system.

23. (Currently Amended) The computer system ~~A method~~ as recited in claim 20, wherein [[a]] proper functioning of the said second set of components requires

installation of the said first set of components in the said first phase.

24. (Currently Amended) The computer system ~~A method~~ as recited in claim 20, wherein the method further comprises ~~comprising~~:

displaying a legend which defines the said indicia coding with respect to the said phases of delivery of said components.

25. (Currently Amended) The computer system ~~A method~~ as recited in claim 20, wherein said indicia coding is selected from the group consisting of texture coding, color coding, and shading coding.

26. (Currently Amended) The computer system as recited in ~~A method of~~ claim 20, wherein the method further comprises ~~comprising~~:

displaying third indicia coding indicating a sequential order of installing the said additional components.
